

## Dear prospective exchange Student,

we are happy you are considering spending an exchange semester (or even longer!) at our university. This list of courses should serve as a **rough orientation** about our academic offer. The course offer during the winter semester is different from the one during the summer semester. And even then, the **course offer may vary** even from summer semester to summer semester or from winter semester to winter semester. This is due to changes in personnel but also to the fact that we are a very research-oriented Faculty, so that our professors adapt their courses to new findings and approaches.

This course list shows last winter semester 2025/26. The course catalogue for every winter semester is published in August and for every summer semester is published in February.

You will see from the list that we are a very quantitative-mathematics oriented Faculty. As a master exchange student, you are allowed to take any course (as long as your home university is fine with you taking a bachelor course). As a bachelor exchange student, you are allowed to take any

bachelor course: if you wish to take a master course you will need to get the approval from the teaching professor (and also check whether your home university is fine with you taking a master course).

As an exchange student you are not tied to a specific degree programme at the School of Business and Economics, so that you are free to choose from any degree programme of our Faculty (Economics, Business Management, Information Systems and Statistics) – as usual, as long as your home university also allows you to do so.

Courses at the School of Business and Economics are divided into 3 main types:

Lectures: **NO** registration needed

Exercise/Tutorials: **NO** registration needed

Seminars: registration needed

**Lectures** are traditional teaching units where a professor speaks to a larger audience. Usually, they come together with an **exercise/tutorial** which is also optional, yet strongly recommended. In the exercise classes you will have the chance to apply the theory from the lectures to case studies and practical examples.

**Seminars** on the other hand are small interactive classes in which the professor and the students interact and the attendance is mandatory. If you wish to attend a seminar you will need to register for it well before the semester begins. The registration procedure and deadline vary as they are set by the professor in charge of each seminar. You can find all the details about registration procedure and deadline of a specific seminar on its page on AGNES, our course catalogue and student portal.

All courses take place in presence.
